# Quick Tips
## For Pet Owners

## app tips

**01 Trusted Places**
Make sure the Trusted Place boundary fits the radius of your yard, dog park, or anywhere you consider safe.

**02 Wi-Fi Fence**
If a geofence is too big, set up a Wi-Fi Fence in your Trusted Place for faster notifications and a radius based on your Wi-Fi signal strength.

**03 Live Mode**
Use this feature sparingly to avoid depleting a full battery charge.

**04 Care Team**
Add family members, walkers, and pet sitters to maximize battery performance and know when your pet is safe with someone you trust.

## attach

Your device is about the size of a teabag, and weighs less than a battery.

**Strap Clip**
Attach to a pet collar or harness. The more you tug, the tighter it grips.

**Fabric Sleeve**
Enclose the device in flexible protective fabric and stretch over nearly any strap, leash, or collar.

**Secure Loop**
The secure loop fits on small collars up to 11mm wide.

## adjust

When your pet lays on the device, chews the plastic, or accidentally submerges in a water bowl, it can interfere with GPS signal or cause accidental damage. Try moving to the top of a harness or collar with the grey side out.
